

Import Data using Transform Maps (Spreadsheet)

Project Documentation Phase

overview

This phase details all system artifacts, database schemas, field mappings, and reporting configurations built within ServiceNow during the project.

System Artifact Specifications

Component	System / Backend Name	Purpose / Description
Custom Target Table	u_employee_test	Permanent storage table for employee data.
Import Set Staging Table	u_employee_import	Temporary staging area for uploaded Excel rows.
Transform Map	Sample Spreadsheet Import	Field mapping and transformation logic container.
Coalesce Identifier	u_employee_id	Unique key used to match existing records during import.
Dashboard Container	Employee Analytics Dashboards	Centralized dashboard hosting report widgets.

Source to Target Field Mapping

Source Field (u_employee_import) —► Target Field (u_employee_test) —► Coalesce

TRUE	u_employee_id	—► u_employee_id (Employee ID)	—►
FALSE	u_employee_name	—► u_employee_name (Employee Name)	—►
FALSE	u_email	—► u_email (Email)	—►
FALSE	u_department	—► u_department (Department)	—►
FALSE	u_location	—► u_location (Location)	—►

Analytics & Reports Configuration

1. Employees by Department

- **Type:** Pie Chart
- **Source Table:** Employee Test (u_employee_test)
- **Group By:** Department | **Aggregation:** Count

2. Employees by Location

- **Type:** Bar Chart
- **Source Table:** Employee Test (u_employee_test)
- **Group By:** Location | **Aggregation:** Count

3. Employee List Report

- **Type:** List
- **Source Table:** Employee Test (u_employee_test)
- **Columns Displayed:** Employee ID, Employee Name, Email, Department, Location
