

Import Data using Transform Maps (Spreadsheet)

Project Testing Phase

Overview

The Project Testing Phase ensures that the ServiceNow data import pipeline operates reliably, validates source data accuracy, and prevents record duplication under various real-world scenarios.

Test Plan & Execution Scenarios

1. Test Case 1: Initial Data Load Verification

- **Objective:** Verify that sample spreadsheet records load into the custom target table without errors.
- **Procedure:** Upload Sample Spreadsheet.xlsx via **Load Data** and execute the Sample Spreadsheet Import Transform Map.
- **Expected Result:** Target table (u_employee_test) populates all fields (Employee ID, Name, Email, Department, Location).
- **Status: Passed** — All initial records were created cleanly.

2. Test Case 2: Coalesce & Duplicate Prevention

- **Objective:** Confirm that setting Coalesce on Employee ID updates existing records and inserts only new records.
- **Procedure:** Set Coalesce = True for Employee ID. Upload an updated Excel file containing 2 modified existing records and 2 new employee records. Execute transformation.
- **Expected Result:** Existing records are updated with new values; new records are inserted; zero duplicates created.
- **Status: Passed** — Transform History log verified **2 Inserted** and **2 Updated**.

3. Test Case 3: Re-importing Duplicate Data (Ignored Check)

- **Objective:** Ensure re-running identical spreadsheet data causes no unnecessary database writes.

- **Procedure:** Upload the exact same file without changes and run the transform.
- **Expected Result:** State completes with 0 inserted, 0 updated, and all rows ignored.
- **Status: Passed — 4 Ignored** records logged in Transform History.

Test Results Summary Table

Test Scenario	Input Dataset	Expected Outcome	Actual Result	Status
Initial Import	Raw Sample Spreadsheet	All records created in target table	All rows inserted successfully	PASS
Data Update & Add	4 rows (2 updated, 2 new)	2 Updated, 2 Inserted	2 Inserted, 2 Updated	PASS
Duplicate Re-import	Identical dataset re-upload	0 inserted, 0 updated, 4 ignored
